

## About The Author

Jack Winnick is an engineering professor with forty years expertise in chemical and nuclear engineering, mainly at Georgia Tech. He is the author of a widely-used Thermodynamics textbook and hundreds of technical articles. In addition to teaching and research in the fields of thermodynamics and electrochemical engineering, he has worked as a consultant in the oil and gas industry, and for the NASA Crew Systems Division. He is also a professional actor, appearing both on stage and television. He is an avid scuba diver and weekend tennis player. He lives in Los Angeles.

## East Wind

**When a violent explosion rocks Los Angeles, killing thousands and leveling an entire beachfront community, the news reports that a nuclear device was involved. The president moves fast to prevent panic across the nation. The government receives an ominous threat from an anonymous Middle Eastern source: similar attacks will be launched upon other American cities unless all aid to Israel is terminated, virtually isolating the Jewish State and allowing its Arab neighbors to overrun it. The FBI, CIA and other federal organizations are called to action. A crack U. S. Israeli team is given the daunting assignment of uncovering the source of the threat and the identity of the next targeted city against a five day deadline.**

**The team: Lara, a young female FBI computer whiz and Uri, a charismatic male Mossad field agent. Theirs is a breakneck chase across the country in a race against time and the unknown Islamist terrorists.**
